TOWARDS GREENER CARIBBEAN CITIES - WATER

- Cities require significant volumes of water from rural to urban areas due to usage and demand issues.
- Upgrading and replacement of pipes has contributed to the savings of potable water in many cities.
- Water efficiency in urban settings is crucial for sustainability.
- Many cities are adopting more efficient water systems to shift away from simple water-loss fees.

A recent on-mine water recycling test focused on reducing water usage and improving water quality for urban consumption.
